

Tyne Valley Motor Homes

Tyne Valley Motor Homes specialise in new and used motor homes. Based in the North East, TVMH's family run company is now celebrating 18 successful years in business.

TVMH like many businesses, realised the increasing impact their electricity bills were having on their overall running costs and started investigating ways of trying to reduce their outgoings.

Solar PV was considered as one such technology they could install. However, having invested heavily in their new premises, they didn't have the available cash to purchase a system outright and sought to find an alternative means of funding their system.

The result; REI has fully funded the installation for TVMH, resulting in them seeing their grid tariff reduce by over 50%. TVMH are forecast to achieve savings in their total electricity bill of over £110k during the course of the next 20 years, all of which has been achieved without them having to invest any capital whatsoever.

System specification

Size of system: 30kWp

Forecast Output: 29,100 kWh/annum

Carbon saving: 9.7 tonnes Co2/annum

Forecast 20-year saving: £84,887
